

PISTON FILLER

model RP-14 & RP-21

OPTIONS

- HOOK-UP TO SEAMER
- HOT-FILL ACCESSORIES
- STAINLESS STEEL COMMON BASE WITH SEAMER
- INSTRUMENTATION CONSOLE FOR FILL OR SEAMER CONTROLS
- DIGITAL CAN COUNTER

These particular models of fillers are manufactured in our factory to provide greater accuracy, speed, flexibility and machine life.

Smooth and accurate operation : These machines are capable of filling single strength fruit juices to an accuracy of +/-3ml. By employing a straight-line take away and direct connection drive from the closer smooth, continuous transfer of the container is ensured with spillage being virtually eliminated. Operating speed up to 150-200 cpm. for the model RP-14. The model RP-21 speed up to 300 cpm. can be obtained depending on the product, can size and closer hook-up.

Versatile : Flexibility is inherent in the machine design. All models can be furnished with change parts that permit the handling of cans ranging from No.200 (50 mm) to No.404 (105 mm) in diameter and from size 2-1/8" (52 mm) to 7" (178 mm) in height. Can height changes are made simply by raising or lowering the bowl.

Heavy duty construction : Built for long life, all revolving parts of these fillers ride on anti-friction bearing surfaces. These models employ non-corrosive metals on all operating mechanisms and stainless steel at all area of product contact.

Low operation and maintenance cost : The machines heavy duty base and simplified drive practically eliminate backlash. The ability to easily and quickly disassemble the fillers valves permits fast and through clean-up operations. A full apron around the lower portion of the unit protects the drive system.
